

MARIAFLORA
ITALIAN LUXURY PERFORMANCE FABRICS

Fabric Care Instruction Guide

Mariaflora Italian Luxury Performance Fabrics fend off anything and are impressively easy to clean. Yet it is important to maintain your textiles if you want them to ease your life for years to come. Please follow our guidelines at all times, and contact our Customer Care in case of doubt. Mariaflora will not be responsible for damages due to negligence in fabric care.

FABRICS

Vacuuming and removing loose dirt from the surface will keep your fabrics like new. It is important to **remove stains and spills immediately** as they occur - in particular if due to oily or greasy substances -, to avoid residuals getting permanently embedded in the fiber's structure and becoming nearly impossible to remove. Sponge briskly with a clean sponge or piece of cloth, lukewarm water and mild detergent. Rinse thoroughly with clean water to remove dirt. Air dry.

Under normal conditions Mariaflora Italian Luxury Performance Fabrics can be **dry cleaned, and hand- or machine-washed** with a gentle 30°C (86°F) cycle and a soft detergent. Low speed spin dry, then air dry. Avoid using tumble dryers. Please note that solution-dyed acrylic is inherently mildew resistant; however, mildew may grow on dirt and residue that has not been removed from the fabric.

Chlorine bleach will not affect the coloration of the solution-dyed acrylic fiber and is therefore acceptable for stubborn stain removal, including mildew. The harshness of bleach products and strong chemicals will eventually affect the strength of any fiber, so we suggest a diluted solution of one part bleach to two parts water. Thorough rinsing is always essential. Professional dry cleaning is always recommended for tough stains.

Foam or covers involved? [Read here.](#)

When cleaning a cushion constructed of exterior-use foam, we recommend flushing it with water and allowing it to air dry without removing the cover. Repeated removal of the cover may eventually break down the seams and distort the fabric. When cleaning a cushion constructed of interior-grade foam, professional dry cleaning is recommended. Please note that interior-grade foam is never recommended for exterior installation. Covers for outdoor furniture must be certified BHT free to avoid chemical reactions that may affect the coloration of the fabric.

TRIM PILLOWS

Gently brush or vacuum any loose dirt from the surface. To avoid staining, spills should be removed immediately. Blot any excess liquid from the surface. Using a clean, damp cloth or sponge, gently dab the spot to remove the remaining stain.

For more stubborn stains, apply a natural soap or mild detergent to the cloth and gently rub (excessive rubbing may damage the trimming). Rinse with clean water and let air dry. Professional cleaning is always recommended for tough stains.

VELVET AND CHENILLE

Mariaflora's 100% solution-dyed acrylic velvets and chenilles offer high-performance and the softest hand on the market thanks to the Alpine waters of our hometown Biella. Being the softest waters in Europe, they prevent the precipitation of chemicals during finishing, leaving our fabrics as soft as their natural counterparts.

For everyday maintenance we recommend vacuuming any loose dirt from the surface of your fabric and remove spills and stains immediately by gently dabbing the spot with a clean cloth or sponge. For more stubborn stains, apply a natural soap or a mild detergent to the cloth and gently rub (excessive rubbing may damage the fabric). Rinse with clean water and let air dry. As a final step, comb the pile with a soft brush following the direction of the nap.

In order to avoid wrinkling and prevent damage to the pile, store bolts horizontally and suspended if possible. Avoid storing velvet and chenille vertically. To remove wrinkling, apply steam gently (no closer than 1cm – 1/2" from the surface) and brush with a soft brush. Final brushing should always be in the direction of the nap.

TIPS TO PREVENT COLOR ALTERATION

Color loss and/or alteration on indoor-outdoor fabrics is usually due to exposure to UV rays, which can alter the fiber's molecular structure and facilitate the development of radical compounds that ultimately undermine the fabric's color fastness. This is not the case for Mariaflora Italian Luxury Performance Fabrics as our fabrics are woven into our signature solution-dyed acrylic yarns, which withstand UV rays (UNI EN ISO 105-B04). However, color alterations (even if rare) can occur in case of negligence in fabric care.

Mariaflora Italian Luxury Performance Fabrics will withstand stains and weather only if properly maintained as instructed by our guidelines (see previous points). In particular: when treated with bleach or strong chemicals, the fabric should always be rinsed thoroughly and dried in the shadow to avoid yellowing. It is furthermore crucial to remove any residuals from the surface of the fabric, to avoid getting them permanently embedded in the fiber and causing chemical reactions that will eventually damage the fabric. This is the case for "sunburn" effects that may occur in very dry areas and deserts: if dust and sand residuals are not periodically removed from the fabric, they will penetrate in the fibers and react with UV rays and other chemical substances (eg. pillows fill, foam...), ultimately causing alterations to the fabric's color.

How do I clean it?

Don't worry, it's easier done than said.

Beer	Sponge briskly with a 1:20 solution of dishwashing liquid or mild detergent to water. Rinse thoroughly.
Wine	Sponge briskly with a 1:20 solution of dishwashing liquid or mild detergent to water. Rinse thoroughly. For stubborn stains, follow up with a bleach solution as needed. Rinse thoroughly.
Oil, Mayonnaise	Sprinkle with cornstarch to absorb oil. Gently rub off any residual with a spoon. Sponge briskly with a 1:20 solution of dishwashing liquid or mild detergent to water. Rinse thoroughly. For stubborn stains, follow up with a bleach solution as needed. Rinse thoroughly.
Tomato Sauce	Sponge briskly with a 1:20 solution of dishwashing liquid or mild detergent to water. Rinse thoroughly. For stubborn stains, follow up with a bleach solution as needed. Rinse thoroughly.
Chewing-gum	Sponge briskly with volatile solvent (acetone) and rinse thoroughly. For stubborn stains, follow up with a bleach solution as needed. Rinse thoroughly.
Cosmetics	Sponge briskly with a 1:20 solution of dishwashing liquid or mild detergent to water. Rinse thoroughly. For stubborn stains, follow up with a bleach solution as needed. Rinse thoroughly.
Ink	Sponge briskly with a 1:20 solution of dishwashing liquid or mild detergent to water. Rinse thoroughly. For stubborn stains, follow up with a bleach solution as needed. Rinse thoroughly.
Dirt	Sponge briskly with a 1:20 solution of dishwashing liquid or mild detergent to water. Rinse thoroughly. For stubborn stains, follow up with a bleach solution as needed. Rinse thoroughly.

But there's more! Our fabrics stand up to more than 120 kinds of stains.
